

Alissa Canesim Bento

Artificial Intelligence Student
Houston City College

AI Expertise

Background combining technical AI development, critical analysis, and the evaluation of intelligent systems with an emphasis on responsible deployment and governance.

Course Highlights

AI Ethics & Societal Impacts

- Examined the ethical and societal implications of AI.
- Explored bias, fairness, privacy, transparency, and accountability.
- Evaluated the importance of responsible AI and governance.

AI in Government

IRS Fraud Detection Case Study

- Analyzed AI-assisted fraud detection and audit selection.
- Evaluated benefits, limitations, and ethical challenges.
- Proposed an Explainable AI Review System for greater transparency and human oversight.

Skills and Knowledge Developed

Technical Concepts

- Artificial Intelligence Applications
- AI Governance
- Explainable AI (XAI)
- Responsible AI
- AI Risk Management
- Artificial General Intelligence (AGI)

Professional Skills

- Research and Technical Analysis
- Case Study Evaluation
- AI Ethics Assessment
- Critical Thinking
- Technical Writing
- AI Solution Design

Real-World Applications

The knowledge developed in this course can be applied to evaluate and improve AI systems across industries such as government, healthcare, finance, manufacturing, agriculture, and smart cities. I can contribute to problems involving AI risk, transparency, bias, explainability, fraud detection, decision support, and responsible implementation by combining technical understanding with critical analysis and human-centered governance.
